CLIA Certificate #: 45D2193869
Billing Code: CPT 87426   ***Administered Test Price: $125.00***

There is no test for COVID-19 that is 100% accurate. Current studies show that the Rapid FDA EU approved Antigen Test done today can detect the virus that causes COVID-19 as well as a lab-based PCR molecular test, both with 100% specificity. There is a very rare possibility of testing with a false negative which means you test negative but actually have the virus but in its earliest stages and have not yet developed symptoms or antigens that can be detected. If you are symptomatic or have had recent exposure to COVID and tested negative on your rapid antigen test we can perform a PCR test, for a fee, for you which will confirm your rapid test results and rule out the possibility early illness.

If you are asymptomatic and have not had exposure and your test was negative, you do not need to quarantine. It is recommended to continue practicing good hand washing, wearing face masks, practicing social distancing and avoiding large gatherings when possible.

If you have any questions or concerns please do not hesitate to contact your Pharmacy, we are here to help!
